

Snow Mantle® Gray Dogwood

Cornus racemosa 'Jade' (Family: *Cornaceae*)

Description: U.S. native shrub. Gray dogwood is a large shrub that is tolerant of many conditions, making it a good choice for rain gardens. It is prone to suckering and colonizing an area, so discretion should be used when choosing a location to plant it.

Hardiness: USDA hardiness zones 3 to 8

Native Habitat: Eastern U.S.

Mature Size: Height: 10' to 15', Spread: 10' to 15'

Form (Shape): Colonizing- spreading habit; individual plants are multi-stemmed and erect

Growth Rate: Fast

Foliage: Deciduous; foliage is a gray-to-dark green, turning a purplish red in the fall

Texture: Medium to fine

Flowers: White, flat-topped clusters (cymes) of white flowers bloom in late spring;
Ornamental

Fruit: ¼", bluish white fruit (drupes); ornamental but not persistent

Light: Full sun to full shade

Soil: Moist well-drained soil

Propagation: Seed

Failure Patterns: Failure is uncommon

Insects and Diseases: None serious

Landscape Use: Borders, groups, masses and naturalizing

Availability: Available in trade
