

Mr. Bowling Ball Arborvitae

Thuja occidentalis 'Bobazam' (Family: Cupressaceae)

Description: Dwarf American arborvitae often used in landscapes as foundations, shrub borders, or as a specimen plant. Since minimal pruning is required, it is a low-maintenance and versatile shrub.

Hardiness: USDA hardiness zones 3 to 7.

Native Habitat: Eastern North America.

Mature Size: Height: 2' to 3', Spread: 2' to 3'

Form (Shape): Round.

Growth Rate: Slow to medium.

Foliage: Coniferous; dense, lacy, thread-like, blue-green foliage; changes to yellow-brown-green in winter.

Texture: Medium to fine.

Flowers: Non-flowering.

Fruit: Cones, non-ornamental.

Light: Full sun.

Soil: Cool, moist, well-drained soil.

Propagation: Cuttings from newest year's growth, and tissue culture.

Failure Patterns: Susceptible to winter burn, or over-browsing from deer and rabbits.

Insects and Diseases: Severe susceptibility to deer browsing; bagworms, mealybugs, scales, and spider mites can be occasional problems.

Landscape Use: Borders, containers, hedges, screens.

Availability: Widely available in nurseries.
