

Golden Carousel® Barberry

Berberis x 'Bailsel' (Family *Berberidaceae*)

Description: Non-U.S. native shrub. This rounded, upright selection of barberry brings bright golden foliage early in the year. Very urban tolerant and adaptable, it thrives in difficult sites. Its foliage hides sharp spines along its branches but is known to be trouble free when it comes to pests and disease.

Hardiness: USDA hardiness zone 4 to 8

Native Habitat: Japan

Mature Size: Height: 4' to 5', Spread: 3' to 4'

Form (Shape): Taller than it is wide, with dense branching

Growth Rate: Moderate

Foliage: Deciduous. Summer foliage is a golden yellow, fading to green in the hottest months. Fall color is an orange-red.

Texture: Medium

Flowers: Small ½" yellow flowers, borne under foliage in April or May; they are insignificant and non-ornamental

Fruit: Bright red ½" oval berries mature in the fall and persist through winter

Light: Full sun, but can get burned in too much heat

Soil: Very adaptable, intolerant to wet soil

Propagation: Great variances in seed propagation

Failure Patterns: Failure is uncommon

Insects and Diseases: None significant, very adaptable and urban tolerant

Landscape Use: Can be utilized in hedges, borders and difficult sites; shown to be invasive

Availability: Available in trade
